## **Deliverable 2**

Member 1 Name: Sushruti Bansod

Member 2 Name: Sherryl Augustine

Team Name: S squared

## 1. Introduction

Write your introduction here. Please describe the division of work between group members. Also, please describe any difficulties that you faced while using JUnit.

When it comes to team projects, both of us knew that equal division of work is important in not only fairness but equal understanding of the topic. We decided that it would come down to equal time spent doing it and every time we would work on something different. We worked together for most of it and worked through difficulties together. We spent the same time working on the implementation and the test cases. Since we worked on it all together, we were able to get through the difficult parts quite easily. One part we had some trouble was when working on the test cases. We both know that mocking is important, and we have been successful with it in the past. This time however, there were a lot of objects and we often got confused on what to mock and. However, we were able to look back at the exercises and deliverables to figure it out. This really proves the saying, "two heads are better than one."

## 2. Code Coverage

At below, paste a screenshot of code coverage stats **after** having completed the coding.
